Set Up Stripe for a Canadian Grooming Business

Set Business country to Canada where available, finish Stripe merchant onboarding, and verify CAD deposits before launch.

Set Business country to Canada in GroomCaptain

1. Sign in as the owner. Open the Organization tab, select **Business country / Canada**, and select **Save Organization**. Review your address, province, postal code and **Business Time Zone** separately.
2. If **Business country** is absent, pause and contact GroomCaptain support before connecting a Canadian Stripe account. Older versions do not have the selector.
3. Open Stripe Connection and select **Connect Stripe**. Use your business website or the GroomCaptain booking link shown under **Business website for Stripe**.

Complete Canadian onboarding on Stripe

Check that Stripe shows **Canada** and that the business details are yours. If Stripe shows the wrong country or your existing Stripe connection is for another country, pause and contact GroomCaptain support before continuing. Complete Stripe's own requests for business details, documents and the bank account to use for payouts. Stripe-hosted onboarding.

Verify readiness and currency

Back in GroomCaptain, use **View Stripe Status**. **Ready for deposits** indicates Stripe has charges and payouts enabled. A pending verification means you may need to complete something in Stripe or wait for its review. When your business is set to Canada, GroomCaptain creates its supported customer payments in Canadian dollars (CAD). Check the currency shown on your customer booking and payment screens before you start collecting.

A deposit is optional. To add one, configure booking deposits and check the displayed amount with an isolated booking walkthrough. Example: a CAD 20 fixed deposit on a CAD 100 estimate leaves CAD 80 of the estimate to collect if the final service price is unchanged.
