Set Up Service Family Pricing by Pet Size and Coat

Create one service with different prices and appointment lengths for dogs and cats by size, coat family, or both.

Choose one service name

Use a **Service Family** for a single job such as Full Groom when the price or time differs by pet. A **Simple Service** uses the normal service price and appointment length as its starting point. Customers choose the family by its service name after confirming their pet details.

Configure the dog or cat price table

1. Open Services & pricing. If the service is new, save it first and reopen it with the **Edit service** pencil.
2. On **Details**, set the base **Price** and **Appointment length (minutes)**. Select the pet types you serve, and enable **Is Active** and **Show in public booking** if the service is ready to offer.
3. On **Family Pricing**, set **Service type** to **Service Family**.
4. In the **Dog** or **Cat** tab, check **Enable dogs** or **Enable cats** as appropriate. Configure each species you serve.
5. In **Pricing mode**, choose **Size + coat family** when you charge by both dog size and coat type. Save, then open your hosted booking page to compare two pet profiles before sharing the link.

Size-only, coat-only, and combined pricing

- **Size only** uses a single price and time per size for that species, regardless of coat family.
- **Coat family only** uses a single price and time per coat family for that species, regardless of size.
- **Size + coat family** uses both together. Select the size tab to fill the matching coat row.

Example

Start with $100 and 60 minutes. Under dogs, choose **Size + coat family**. In **Medium**, set **Curly/Wavy** to $140 and 130 minutes. A matching medium curly dog starts at $140 for 130 minutes before estimate rules or add-ons. A blank price or duration inherits that particular default.

Choose Family Defaults and Overrides if a matching entry disappears after saving or seems to inherit the wrong value.
